# 1 What We Are Trying to Do

Conducting practical field studies, interviews, and delving into the framework of an organization to have a deeper understanding of how professional practices work. In our case, focusing on assessing the professional practices within NIC's IT infrastructure and operations.

## Workflow Diagram

```
                    Start
                      |
                      v
  Managing Field   leading to   Conducting    Gathering     Analysing     Making Report
      Visit    ------------>     Interviews   Information    Information
                                                                                |
                                                                                v
                                                                             Finish
```

# 2 Why We Selected the Organization

The national incubation center's entire purpose is to provide an environment for budding startups to grow. A natural part of growing a new business is to provide it with professional guidance as it blooms. For this reason, the NIC serves as a perfect platform for us to get to know about not only one but many startups and the professional practices they are trained to use.

# 3 Impacts of the Project

Since the organization we've chosen is one that will provide us with the opportunity to get involved with many startups, it will serve as an avenue for our students to get better acquainted with professional practices in a rich variety of different software environments.

As for our selected organization, it will be able to positively influence FAST-NU's budding undergraduate students through our various visits and reports. This influence will promote good professional practices in their individual careers.
